

NVIDIA AI LAB PROGRAMS FOR COLLEGES & UNIVERSITIES

Codeeint brings NVIDIA to your campus.

The world's #1 AI brand — installed in your lab,
running on your students' projects.

90% of the world's AI data centres run on NVIDIA. Tesla. OpenAI. Google
DeepMind. ISRO. Every autonomous car. Every LLM. Every real-time vision system.
Your students deserve to learn on the same hardware the industry runs on — not
theory, not simulations. Codeeint makes it happen.

90%

WHY YOUR COLLEGE NEEDS NVIDIA — NOT JUST "AI"

NVIDIA is the **Infrastructure** of the AI World. Codeeint is How Your College **Gets It.**

When industry says "AI engineer", they mean someone who can write CUDA kernels, deploy TensorRT models, run inference on Jetson, and train on H100 clusters. These are not optional. They are the baseline. Codeeint is the only partner who brings the complete NVIDIA stack — hardware, software, curriculum and certification — to your campus as a turnkey program.

90%

of AI infrastructure runs NVIDIA

AWS, Azure, Google Cloud, Oracle — all run NVIDIA H100 and A100 clusters. Tesla Autopilot. OpenAI GPT-4. Google Gemini. Meta LLaMA. ISRO satellite AI. Ola Krutrim. Every major AI system your students will work on after graduation was built on NVIDIA hardware. Training on anything else means starting over on day one of the job.

₹4500Cr

India's National AI GPU Push

India's National Supercomputing Mission has deployed ₹4500 crore in GPU infrastructure. 34,000+ NVIDIA H100 and A100 GPUs are now active across Indian data centres. Sarvam AI received 4,096 H100 GPUs to build India's own LLM. The government mandates NVIDIA. Industry mandates NVIDIA. Your curriculum should too.

[IndiaAI Mission](#)

For Students — Industry Ready

Graduate with CUDA, TensorRT and JetPack on your resume. Every company that hires AI engineers uses these tools. Your batchmates from other colleges will Google this on their first day. You already know it.

For Faculty — Research Access

Publish on real GPU hardware. NVIDIA academic GPU grants, DLI Instructor certification and research collaboration pathways — all unlocked through Codeeint's programs.

For Institutions — Brand Position

NVIDIA AI Lab recognition. Admissions edge. NAAC/NBA documentation. Your institution becomes the one that has the NVIDIA lab — not the one that is planning to get one.

01 — NVIDIA EDGE AI LAB KITS

Pick Your NVIDIA Jetson Tier. Codeeint Does the Rest.

Every kit arrives pre-loaded with JetPack SDK, CUDA configured, curriculum ready and trainer scheduled. You choose the performance level. Codeeint installs, trains and supports for 12 months.

ENTRY — GENERATIVE AI

67
TOPS AI

Jetson Orin Nano Super Developer Kit

Most affordable · \$249 · Runs LLMs, vision transformers, YOLO

Specifications

- 8GB LPDDR5 · 1024-core Ampere GPU
- 6-core Arm Cortex-A78AE CPU
- 67 TOPS — 1.7× boost via software update
- 32GB eMMC + NVMe SSD support
- 7W — 25W configurable power modes
- WiFi 5 + BT · CSI camera · 40-pin GPIO

What Students Do

- Run LLMs: Llama 3, Mistral 7B at the edge
- Real-time object detection — YOLO, SSD
- Vision transformers & image generation
- ROS2 autonomous robot navigation
- TensorRT model optimisation hands-on
- Build and deploy generative AI apps

Best For

- UG CSE / AI / ECE labs (entry)
- Student project workstations (clusters)
- NVIDIA Deep Learning AI Certificate
- AI Fundamentals courses
- IoT + Edge AI combined programs
- Budget-first deployments

Orin Nano Super

JetPack 6

LLM Capable

ROS2

CUDA+TensorRT

67 TOPS

ADVANCED — PRODUCTION AI

157
TOPS AI

Jetson Orin NX 16GB Module + Carrier Board

Production-grade module · 5× AGX Xavier performance · For PG labs, robotics research, autonomous systems

Specifications

- 16GB LPDDR5 · 1024-core Ampere + Tensor Cores
- 8-core Arm Cortex-A78AE CPU
- 2× DLA (Deep Learning Accelerators)
- Up to 157 TOPS in Super Mode
- 10W — 40W power modes
- Smallest NVIDIA Jetson form factor

What Students Do

- Multi-camera perception systems
- SLAM + full autonomous navigation (ROS2)
- Industrial AI defect detection
- Medical imaging model deployment
- NLP transformer inference at the edge
- Production-grade AI model fine-tuning

Best For

- PG / M.Tech AI & Robotics labs
- Research project hardware
- Autonomous vehicle prototypes
- NVIDIA Jetson AI Specialist cert
- Centre of Excellence builds
- PhD embedded AI research

Orin NX 16GB

157 TOPS

SLAM / Nav2

2× DLA

Production Module

Jetson AGX Orin 64GB Developer Kit

8× more powerful than AGX Xavier · Flagship edge AI · Used in autonomous vehicles, humanoid robots & smart factories

Specifications

- 64GB LPDDR5 · 204.8 GB/s bandwidth
- 2048-core Ampere GPU + 64 Tensor Cores
- 12-core Arm Cortex-A78AE CPU
- 2× NVDLA v3.0 · PCIe Gen4 · USB 3.2
- 15W — 60W configurable power
- Emulates all lower Orin modules

What Students Do

- Multi-sensor autonomous robot systems
- Real-time LLM inference at the edge
- 3D perception + LiDAR fusion (SLAM)
- Smart factory / Industry 4.0 AI deployment
- Multi-camera DeepStream pipelines
- NVIDIA Omniverse digital twin builds

Best For

- AI Centre of Excellence
- Autonomous systems research lab
- Smart manufacturing AI lab
- NVIDIA DLI Advanced courses
- Industry collaboration projects
- National competition entry platform

02 — NVIDIA-POWERED AI ROBOTICS

Real Robots. Real NVIDIA Hardware.

Real AI Running on Day One.

Every robot kit in the Codeeint portfolio is powered by NVIDIA Jetson. Students do not simulate — they build, deploy and run live AI models on hardware. These are the same platforms used globally by NVIDIA's own developer community.

KIT 01 · WAVESHARE JETBOT · NVIDIA OFFICIAL PLATFORM

JetBot AI Robot Car — Jetson Nano / Orin Nano

NVIDIA's own open-source AI robot. Globally recommended by NVIDIA for deep learning and computer vision education. Students train their own neural networks and watch them run live on the car.

**NVIDIA
Official**

Recommended Platform

Hardware

- Jetson Nano 4GB Dev Kit
- IMX219-160 camera (160° FOV)
- TB6612FNG dual motor driver
- OLED display (IP, RAM, battery)
- Intel AC8265 WiFi/BT module
- 3— 18650 battery (12.6V)

What Students Build

- Facial recognition + tracking
- Real-time YOLO object detection
- Autonomous road following (CNN)
- Collision avoidance neural network
- Gesture-controlled navigation
- Custom AI model training pipeline

NVIDIA Skills Gained

- CNN training from scratch (PyTorch)
- TensorRT model optimisation
- JetPack SDK end-to-end
- OpenCV computer vision pipeline
- CUDA-accelerated inference
- ROS nodes and integration

KIT 02 · WAVESHARE JETRACER · HIGH-SPEED AI RACING

JetRacer AI Racing Car — Train a Neural Network, Race It Live

Students collect their own data, train a ResNet18 model with transfer learning, and race the car at full speed using only their neural network's predictions. No remote control — pure AI driving.

ResNet18

Transfer Learning

Hardware

- Jetson Nano Dev Kit
- Wide-angle CSI AI camera
- High-speed servo steering
- Brushless DC motor + ESC
- WiFi module (real-time stream)

What Students Build

- Live track data collection pipeline
- ResNet18 transfer learning model
- Regression-based steering CNN
- Real-time inference at racing speed
- Jupyter-based training workflow

NVIDIA Skills Gained

- Transfer learning with PyTorch
- Regression vs classification models
- Edge deployment benchmarking
- Model optimisation for latency
- Nvidia JetPack hands-on

Jetson Nano

Transfer Learning

ResNet18

Race Day AI

PyTorch

KIT 03 · DOFBOT · AI VISION ROBOTIC ARM (ROS)

6-DOF AI Vision Arm — Jetson Nano

6-joint robot arm with AI vision-guided pick-and-place. Full ROS integration, MoveIt inverse kinematics and colour-sorting with OpenCV.

Hardware

- Jetson Nano (4GB)
- 6— high-torque servo joints
- USB AI camera module
- ROS Melodic / Noetic stack

Projects + AI Skills

- Vision-guided pick and place
- Colour + shape sorting (OpenCV)
- MoveIt inverse kinematics
- ROS action server programming
- Industrial arm AI simulation

ROS / MoveIt

AI Vision

6-DOF IK

OpenCV

KIT 04 · JETRACER ROS · FULL NAVIGATION STACK

JetRacer ROS — SLAM + Autonomous Nav Stack

JetRacer with full ROS2 navigation — LiDAR SLAM mapping, Nav2 autonomous path planning and multi-sensor fusion.

Hardware

- Jetson Nano / Orin Nano
- LiDAR sensor (360° mapping)
- Stereo depth camera
- IMU + encoder fusion

Projects + AI Skills

- SLAM mapping (Gmapping/Cartographer)
- Autonomous Nav2 obstacle avoidance
- Multi-point patrol mission
- ROS2 topics / services / actions
- Sensor fusion (LiDAR + camera)

ROS2

SLAM

Nav2

LiDAR

KIT 05 · YAHBOOM AI ROBOT DOG · FLAGSHIP KIT · JETSON ORIN NANO

AI Quadruped Robot Dog — 67 TOPS · Face Recognition · Voice · SLAM · ROS2

67 TOPS

Orin Nano

The most advanced hands-on AI kit available for college labs. A 12-servo quadruped AI dog running on Jetson Orin Nano — face recognition, voice commands, SLAM mapping, emotional OLED expression, full ROS2 navigation. Students run real AI on a real robot dog. Nothing else comes close in a college lab setting.

Hardware

- Jetson Orin Nano (67 TOPS)
- 12 — metal-gear high-torque servos
- Intel RealSense depth camera
- LiDAR sensor (optional)
- Micro OLED display (expression)
- Directional microphone array
- WiFi + Bluetooth · 12V 5A power

What Students Build

- Quadruped gait AI (trot, crawl, turn)
- Face recognition + person tracking
- SLAM mapping with LiDAR (ROS2)
- Voice command recognition + action
- Emotional expression OLED control
- Object following and avoidance
- Transfer learning on dog behaviour

NVIDIA AI Skills Gained

- Inverse kinematics — 4-legged gait
- ROS2 full navigation stack
- Computer vision at 67 TOPS edge
- NLP voice command pipeline
- SLAM: Gmapping + Cartographer
- Reinforcement learning basics
- Edge AI deploy + benchmark

03 — GPU COMPUTE INFRASTRUCTURE

From GPU Workstations to H100 Clusters. Codeeint Deploys Both.

Edge AI teaches students how AI works. GPU compute infrastructure teaches them how AI scales. Codeeint supplies, deploys and supports everything — from a single RTX workstation for your faculty research desk to an 8×H100 cluster for your AI Centre of Excellence.

Feature	GPU Workstation RTX 4090 / RTX 6000 Ada	Multi-GPU Server 4× A100 / H100 PCIe	HPC Cluster 8× H100 SXM5
Best for	Faculty research, AI capstone projects	Department AI compute hub	Institute AI Centre of Excellence
GPU Memory	24GB — 48GB VRAM	4× 80GB = 320GB total	8× 80GB HBM3 = 640GB
AI Performance	82.6 TFLOPS (FP16)	~1.2 PetaFLOPS FP8	32 PetaFLOPS FP8
LLM Training	Up to 13B parameters	Up to 70B parameters	Trillion-parameter models
Concurrent Students	1—4	20—50 (MIG partitioning)	100+ (MIG partitioning)
NVIDIA NVLink	—	600 GB/s	900 GB/s NVLink 4.0
MIG Support	—	✓	✓
Research Publications	✓	✓	✓

GPU Workstation

RTX 4090 or RTX 6000 Ada. Pre-installed CUDA, PyTorch, TensorFlow, Jupyter. Ideal for faculty research, final year projects and small team AI development.

- CUDA 12TensorRT
- PyTorchJupyter

Multi-GPU HPC Server

4× or 8× A100/H100 PCIe. SLURM job scheduling. 20—50 students via MIG. Full DL training stack. Every student gets their own GPU slice — no waiting.

- SLURMMIGNVLink
- H100

H100 DGX-Class Cluster

8× H100 SXM5 with NVSwitch 900 GB/s. LLM training, exascale HPC. Suitable for AI Centre of Excellence, govt-funded research and national-level AI labs.

- H100 SXM5NVSwitch
- NeMoTriton

What GPU Compute Unlocks for Your Institution

RESEARCH & PUBLICATION

- ▣ Train LLMs and publish at NeurIPS, CVPR, ICLR
- ▣ Medical imaging AI: MRI/CT segmentation models
- ▣ Climate, agriculture and language AI at scale
- ▣ Achieve in hours what takes weeks on CPUs
- ▣ Compete with IIT-level research output

STUDENT PLACEMENT EDGE

- ▣ Final year projects with real GPU training — not Colab
- ▣ HPC job scheduling (SLURM) experience before placement
- ▣ LLM fine-tuning, RAG, multimodal AI deployments
- ▣ Work that companies want to hire — not toy demos
- ▣ Resume: trained LLaMA on H100 cluster = instant interview

04 — ENGAGEMENT PROGRAMS

Seven Ways to Partner with Codeeint. One Outcome: NVIDIA in Your Lab.

01 AI Lab Setup — Complete NVIDIA Turnkey Installation

Full lab design, hardware supply, JetPack pre-configuration, curriculum delivery, trainer and 12 months of support. We hand you a running NVIDIA AI lab — not a box of components.

CODEEINT SUPPLIES

- ☑ NVIDIA Jetson kits + all robot kits selected
- ☑ JetPack SDK + AI software pre-installed
- ☑ Lab layout design and workbench setup
- ☑ Full AI project-based curriculum
- ☑ NVIDIA-certified trainer for all sessions
- ☑ 12-month technical and curriculum support

INSTITUTION PROVIDES

- ☑ Dedicated lab room (existing or new)
- ☑ Workbench tables, projector, internet
- ☑ Faculty coordinator contact
- ☑ Timetable slot per batch per week

02 Hands-On Workshops

Hardware workshops on NVIDIA Jetson kits or remote sessions on Codeeint's GPU server. 1-day to 4-day formats. No hardware purchase required.

WORKSHOP FORMATS

- ☑ 1-Day: AI Foundations on Jetson
- ☑ 2-Day: Computer Vision with JetBot
- ☑ 3-Day: Autonomous Systems + ROS2
- ☑ Remote GPU: Deep Learning on H100

03 Faculty Development Programme (FDP)

Accredited FDP for faculty — NVIDIA AI frameworks, edge deployment, GPU computing. Faculty who complete earn NVIDIA DLI Instructor certification eligibility.

FDP TOPICS

- ☑ Deep Learning with CUDA + TensorRT
- ☑ Autonomous Systems with Isaac ROS
- ☑ Computer Vision — DeepStream SDK
- ☑ LLM fine-tuning with NeMo framework

Core AI Concepts — NVIDIA First

- Artificial + Convolutional Neural Networks

Computer Vision + Object Detection

Generative AI + Diffusion Models

TensorRT Quantisation + Pruning

Reinforcement Learning

NLP: Sentiment, NER, Q&A, Chatbots
- Transformer Architecture + Attention

Large Language Models (LLM) on Jetson

Transfer Learning + Fine-Tuning (TAO)

Edge AI Deployment + Benchmarking

MLOps: Training, Serving, Monitoring

ROS2 Robotics + SLAM + Nav2

NVIDIA STACK STUDENTS USE

CUDA	TensorRT	JetPack	Isaac ROS
DeepStream	TAO Toolkit	NeMo	Triton

04 — International Certifications

- NVIDIA Deep Learning AI Certificate (DLI)

NVIDIA Jetson AI Specialist

AWS / Azure AI & ML Certifications

Google Professional ML Engineer

CompTIA Security+ · Docker / K8s · RHCSA

x: Cyber Security

- AI-powered threat detection

Pen testing + ethical hacking

CompTIA Security+ pathway

Network security fundamentals

Cloud + DevOps

- AWS SageMaker / Azure ML

Kubernetes + Docker CI/CD

MLflow model tracking

AWS / Azure certifications

05 — WHAT YOUR INSTITUTION ACTUALLY GETS

This Is Not a Vendor Relationship. This Is **NVIDIA** on Your Campus.

Other vendors sell you hardware and leave. Codeeint installs a running NVIDIA AI lab — curriculum, trainer, certifications and 12 months of support included. When a student, faculty member or accreditation committee walks into your lab, they see NVIDIA. That is the brand your college carries.

4+

NVIDIA + International
certifications per student

Hands-on NVIDIA AI
projects per batch

12Mo

Post-installation support
included

NAAC

Lab documentation ready
for accreditation

NVIDIA

Brand on your lab wall, your
brochure, your website

For Students

- ☑ Build & deploy real AI models on NVIDIA Jetson hardware
- ☑ Train neural networks on GPU — not Colab, not simulation
- ☑ Graduate with CUDA, TensorRT & JetPack on resume
- ☑ 4+ certifications: NVIDIA DLI, AWS / Azure, CompTIA
- ☑ Portfolio of real AI projects — not theory assignments
- ☑ Internship & project incubation pathways

For Faculty & Management

- ☑ NVIDIA AI Lab recognition — visible brand on campus
- ☑ NAAC/NBA lab documentation provided by Codeeint
- ☑ Faculty NVIDIA DLI Instructor certification pathway
- ☑ NVIDIA academic GPU grant access via Codeeint
- ☑ Admissions differentiator — "the college with NVIDIA lab"
- ☑ Zero management burden — Codeeint handles everything

✓ CODEEINT SUPPLIES EVERYTHING

- ☑ All NVIDIA Jetson kits & robot kits
- ☑ JetPack SDK + AI software pre-installed
- ☑ Complete AI project-based curriculum
- ☑ NVIDIA-certified trainer for all sessions
- ☑ Printed lab manuals and project guides
- ☑ Student + faculty certifications
- ☑ 12-month technical + curriculum support

INSTITUTION PROVIDES

- ☑ Dedicated lab room (existing works fine)
- ☑ Workbench tables (one per student pair)
- ☑ Projector / smartboard for theory
- ☑ Internet connectivity (preferred)
- ☑ Timetable slot per batch per week
- ☑ Faculty coordinator to liaise

READY TO PUT NVIDIA IN YOUR COLLEGE LAB?

One call. We bring NVIDIA to your campus.

Tell us your department, student strength and program interest. Codeeint will return a complete NVIDIA AI lab proposal — hardware selection, curriculum plan, certification pathway, cost breakdown and timeline — within 48 hours. No commitment required.
